

WORKSHOP REGISTRATION & CONFIRMATION APP

1. Introduction

Workshop Registration & Confirmation App is a web-based application developed using React JS and CSS. The main purpose of this project is to simplify the workshop registration process. Participants can register their details through an online form and receive a confirmation message after successful registration. The system also prevents duplicate registrations by checking the participant's email address.

2. Problem Statement

In many institutions, workshop registrations are managed manually, which can lead to duplicate entries, data loss, and difficulties in maintaining participant records. This project aims to provide a simple digital solution for managing workshop registrations efficiently.

3. Objectives

Primary Objectives

- To develop an online workshop registration system.
- To store participant information efficiently.
- To display confirmation messages after successful registration.
- To prevent duplicate registrations.

Secondary Objectives

- To provide a user-friendly interface.
 - To improve registration accuracy.
 - To reduce manual data management.
-

4. Scope of the Project

The project is designed for educational institutions, training centers, and organizations that conduct workshops. It allows participants to register online and enables organizers to maintain participant records effectively.

5. Technologies Used

Frontend Technologies

- React JS
- CSS

Development Tools

- Visual Studio Code
- Node.js
- Vite

Version Control

- GitHub
-

6. System Requirements

Hardware Requirements

- Processor: Intel i5
- RAM: 4 GB minimum
- Storage: 500 MB free space

Software Requirements

- Windows 10/11
- Visual Studio Code

- Node.js
 - React JS
 - Web Browser (Chrome, Edge, Firefox)
-

7. Methodology

The application follows a simple registration workflow:

1. User opens the application.
 2. User enters registration details.
 3. System validates the entered information.
 4. Duplicate email addresses are checked.
 5. If no duplicate exists, registration is completed.
 6. Confirmation message is displayed.
 7. Participant details are added to the participant list.
-

8. Modules Description

Module 1: Registration Form

This module collects participant information such as name, email address, and workshop name.

Module 2: Validation Module

This module validates user input and ensures required fields are completed.

Module 3: Duplicate Entry Prevention Module

This module checks whether the participant has already registered using the same email address.

Module 4: Confirmation Module

This module displays a success message after successful registration.

Module 5: Participant List Module

This module stores and displays the list of registered participants.

9. Features of the Project

- User-friendly interface
 - Online workshop registration
 - Confirmation message display
 - Duplicate registration prevention
 - Dynamic participant list
 - Responsive design
-

10. Project Architecture

User → Registration Form → Validation → Duplicate Check → Confirmation Message → Participant List

11. Advantages

- Easy to use
- Saves time
- Reduces manual work
- Prevents duplicate registrations
- Improves data management
- Provides quick confirmation

12. Source Code

(App.jsx Code)

```
import React, { useState } from "react";
import "./App.css";

function App() {
  const [participants, setParticipants] = useState([]);
  const [name, setName] = useState("");
  const [email, setEmail] = useState("");
  const [workshop, setWorkshop] = useState("");
  const [message, setMessage] = useState("");

  const handleSubmit = (e) => {
    e.preventDefault();

    const exists = participants.find(
      (participant) => participant.email === email
    );

    if (exists) {
      setMessage("Participant already registered!");
      return;
    }
  }
}
```

```
const newParticipant = {  
  name,  
  email,  
  workshop,  
};
```

```
setParticipants([...participants, newParticipant]);  
setMessage("Registration Successful!");
```

```
setName("");  
setEmail("");  
setWorkshop("");  
};
```

```
return (  
  <div className="container">  
    <div className="card">  
      <h1>Workshop Registration</h1>  
  
      <form onSubmit={handleSubmit}>  
        <input  
          type="text"  
          placeholder="Enter Name"  
          value={name}  
          onChange={(e) => setName(e.target.value)}  
          required
```

```
/>
```

```
<input  
  type="email"  
  placeholder="Enter Email"  
  value={email}  
  onChange={(e) => setEmail(e.target.value)}  
  required  
>
```

```
<input  
  type="text"  
  placeholder="Workshop Name"  
  value={workshop}  
  onChange={(e) => setWorkshop(e.target.value)}  
  required  
>
```

```
<button type="submit">Register</button>  
</form>
```

```
{message && <p className="message">{message}</p>}
```

```
<h2>Participants List</h2>
```

```
<ul>
```

```
{participants.map((participant, index) => (  
  <li key={index}>  
    <strong>{participant.name}</strong>  
    <br />  
    {participant.email}  
    <br />  
    {participant.workshop}  
  </li>  
  )})  
</ul>  
</div>  
</div>  
);  
}  
export default App;
```

(App.css Code)

```
body {  
  margin: 0;  
  font-family: Arial, sans-serif;  
  background: linear-gradient(to right, #4facfe, #00f2fe);  
}  
.container {  
  display: flex;  
  justify-content: center;
```

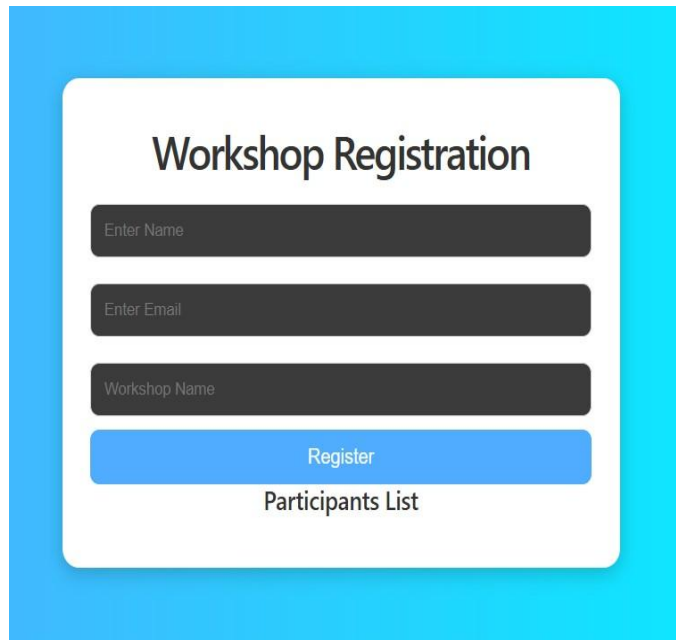

```
    align-items: center;
    min-height: 100vh;
}
.card {
    background: white;
    width: 450px;
    padding: 25px;
    border-radius: 15px;
    box-shadow: 0 4px 15px rgba(0,0,0,0.2);
}
h1,
h2 {
    text-align: center;
    color: #333;
}
form {
    display: flex;
    flex-direction: column;
}
input {
    margin: 10px 0;
    padding: 12px;
    border-radius: 8px;
    border: 1px solid #ccc;
}
button {
```

```
padding: 12px;
border: none;
border-radius: 8px;
background: #4facfe;
color: white;
font-size: 16px;
cursor: pointer;
}
button:hover {
    background: #008cff;
}
.message {
    text-align: center;
    color: green;
    font-weight: bold;
}
ul {
    list-style: none;
    padding: 0;
}
li {
    background: #f4f4f4;
    margin: 10px 0;
    padding: 10px;
    border-radius: 8px;
```

13. Output Screenshots

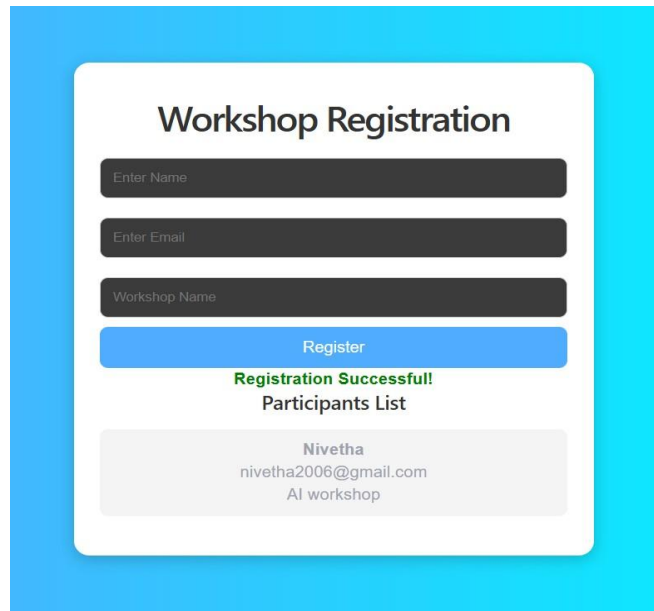

Screenshot 1

A screenshot of a web form titled "Workshop Registration" set against a bright blue background. The form is a white rounded rectangle containing three dark grey input fields with placeholder text: "Enter Name", "Enter Email", and "Workshop Name". Below these fields is a blue "Register" button. Underneath the button, the text "Participants List" is displayed.

Screenshot 2

A screenshot of the same "Workshop Registration" form, now showing a successful registration confirmation. The "Register" button is still present. Below it, the text "Registration Successful!" is displayed in green, followed by "Participants List" in black. At the bottom of the form, a light grey box contains the following text: "Nivetha", "nivetha2006@gmail.com", and "AI workshop".

AI Workshop

This screenshot shows a web form titled 'Workshop Registration'. It contains three input fields with pre-filled text: 'Nivetha', 'nivetha2006@gmail.com', and 'AI Workshop'. Below these fields is a blue 'Register' button. A green message 'Participant already registered!' is displayed below the button, indicating a duplicate registration. Below the message is a section titled 'Participants List' which contains a light gray box displaying the same information: 'Nivetha', 'nivetha2006@gmail.com', and 'AI Workshop'.

14. Future Enhancements

- Database integration
- User login and authentication
- Email confirmation system
- Workshop scheduling feature
- Admin dashboard

15. Conclusion

The Workshop Registration & Confirmation App was successfully developed using React JS and CSS. The application provides an efficient solution for managing workshop registrations. It enables users to register easily, prevents duplicate registrations, and maintains participant information effectively. The project demonstrates the practical implementation of React concepts and modern web development techniques.
